Back to Week 3

4/5 points earned (80%)

Quiz passed!

 For this quiz we will be using several R packages. R package versions change over time, the right answers have been checked using the following versions of the packages.

1/1 points

AppliedPredictiveModeling: v1.1.6

caret: v6.0.47

ElemStatLearn: v2012.04-0

pgmm: v1.1

rpart: v4.1.8

If you aren't using these versions of the packages, your answers may not exactly match the right answer, but hopefully should be close.

Load the cell segmentation data from the AppliedPredictiveModeling package using the commands:

- 1 library(AppliedPredictiveModeling)
 2 data(segmentationOriginal)
 3 library(caret)
- 1. Subset the data to a training set and testing set based on the Case variable in the data set.
- 2. Set the seed to 125 and fit a CART model with the rpart method using all predictor variables and default caret settings.
- 3. In the final model what would be the final model prediction for cases with the following variable values:
- a. TotalIntench2 = 23,000; FiberWidthCh1 = 10; PerimStatusCh1=2
- b. TotalIntench2 = 50,000; FiberWidthCh1 = 10; VarIntenCh4 = 100
- c. TotalIntench2 = 57,000; FiberWidthCh1 = 8;VarIntenCh4 = 100
- d. FiberWidthCh1 = 8;VarIntenCh4 = 100; PerimStatusCh1=2

a. WS

b. WS

c. PS

d. Not possible to predict

a. PS

b. WS

c. PS

d. WS

a. PS

b. Not possible to predict

c. PS

d. Not possible to predict

a. PS

b. WS

c. PS

d. Not possible to predict

Correct Response

points

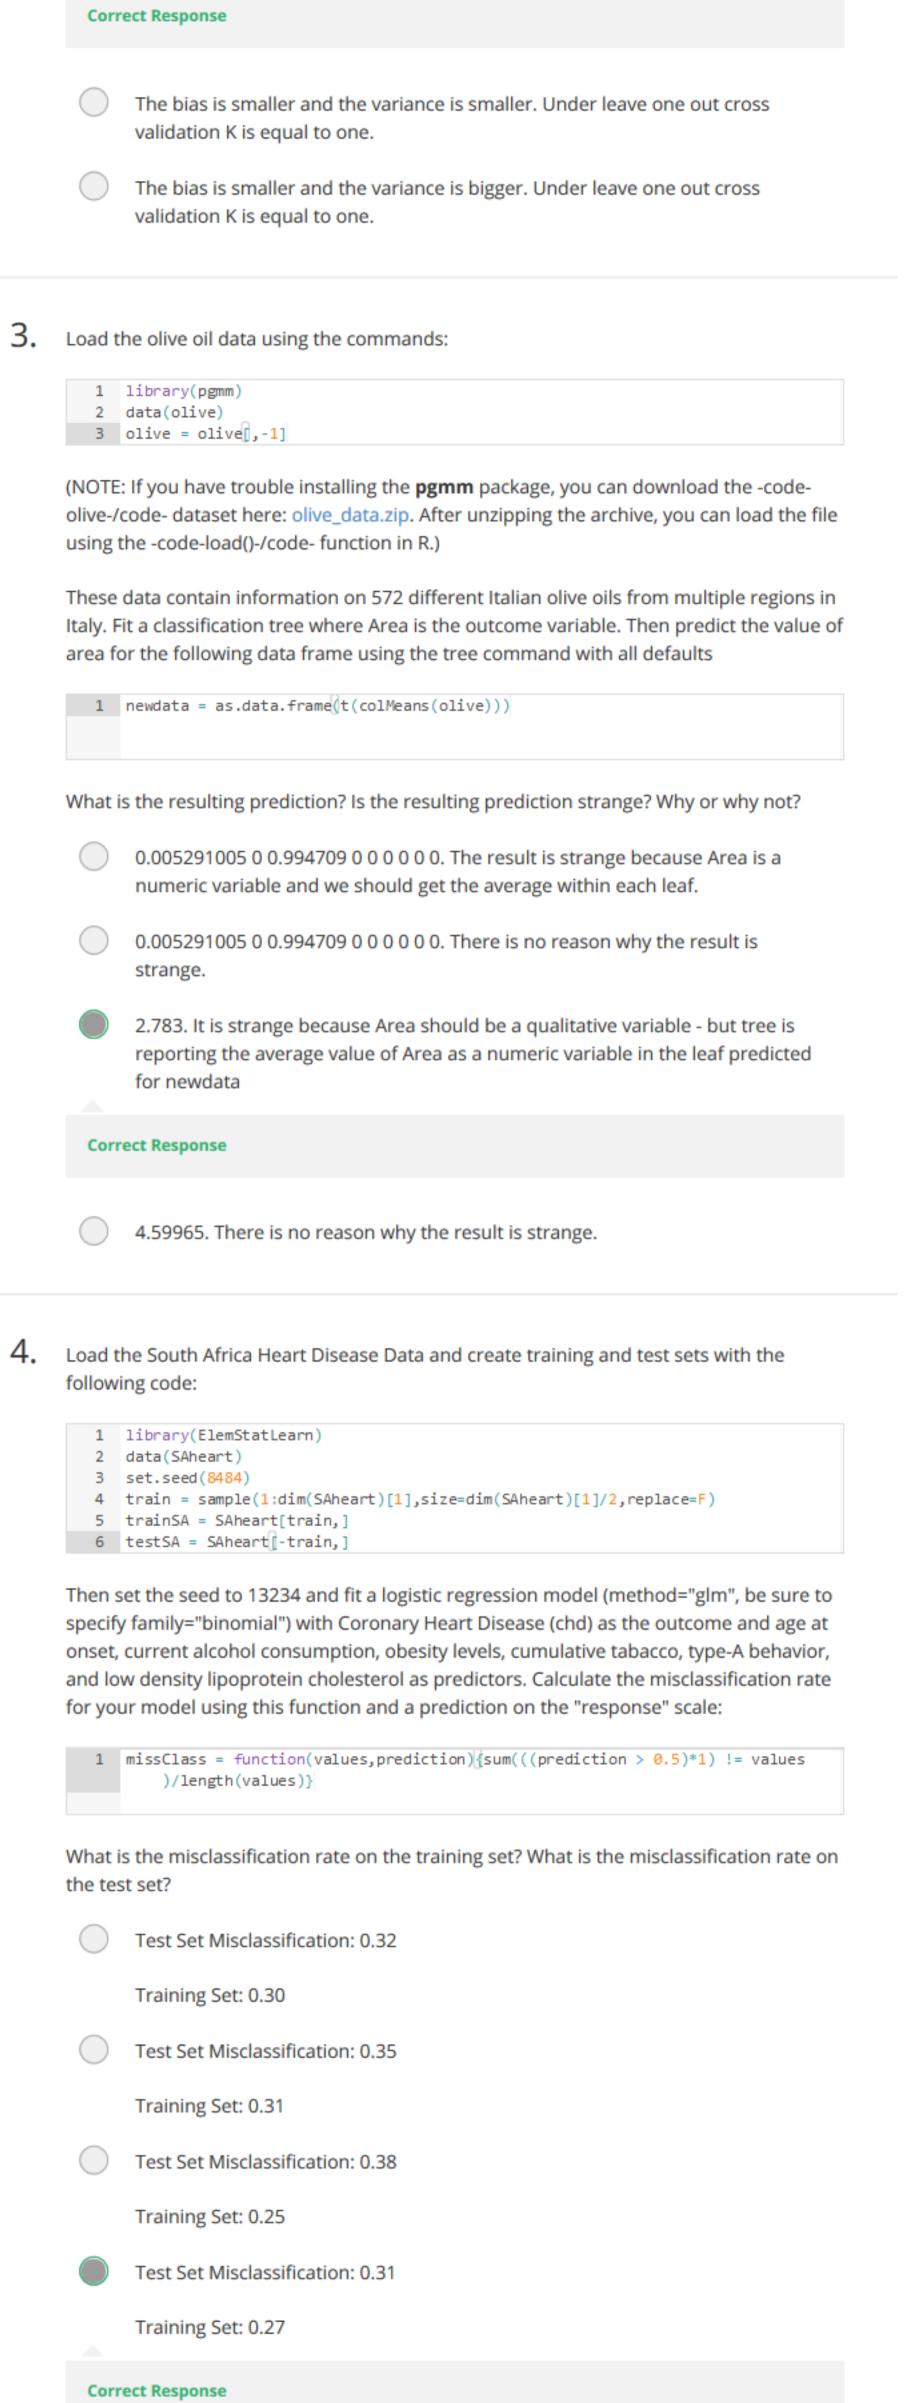

2. If K is small in a K-fold cross validation is the bias in the estimate of out-of-sample (test set) accuracy smaller or bigger? If K is small is the variance in the estimate of out-of-sample (test set) accuracy smaller or bigger. Is K large or small in leave one out cross validation?

The bias is larger and the variance is smaller. Under leave one out cross validation K is equal to two.

The bias is larger and the variance is smaller. Under leave one out cross validation K is equal to the sample size.

points

points

5. Load the vowel.train and vowel.test data sets:

1 library(ElemStatLearn)
2 data(vowel.train)
3 data(vowel.test)

Set the variable y to be a factor variable in both the training and test set. Then set the seed to 33833. Fit a random forest predictor relating the factor variable y to the remaining variables. Read about variable importance in random forests here: http://www.stat.berkeley.edu/~breiman/RandomForests/cc_home.htm#ooberr The caret package uses by default the Gini importance.

	Calculate the variable importance using the varImp function in the caret package. What is the order of variable importance?				
		The order of the variables is:			
		x.10, x.7, x.5, x.6, x.8, x.4, x.9, x.3, x.1,x.2			
	Incor	rect Response			
		The order of the variables is:			
		x.10, x.7, x.9, x.5, x.8, x.4, x.6, x.3, x.1,x.2			
		The order of the variables is:			
		x.2, x.1, x.5, x.6, x.8, x.4, x.9, x.3, x.7,x.10			
		The order of the variables is:			
		x.1, x.2, x.3, x.8, x.6, x.4, x.5, x.9, x.7,x.10			
			ß	\bar{V}
